SUMMARY

Backend engineer with nine years of experience building payment and ledger services in Python and PostgreSQL. Friends and colleagues call me Em. I like small services, boring technology and tests that fail for the right reason.

EXPERIENCE

Staff Backend Engineer, Kestrel Payments, 2021 to present

- Led the redesign of the public payments API (FastAPI, 60 endpoints, 2,000 requests per second at peak), with versioned contracts and a published OpenAPI spec used by 300 partners.
- Designed the ledger schema in PostgreSQL (partitioned tables, covering indexes, zero-downtime migrations); cut the p95 of the statement query from 2.4 s to 180 ms.
- Set the testing standard for a team of 12: pytest unit and integration suites, contract tests against partner mocks, 90 percent branch coverage on the money paths; production defects fell by 40 percent in a year.
- Moved six services to containers on a managed Kubernetes cluster with Terraform; owned the deploy pipeline and cost reviews.
- Defined service level objectives, built the dashboards and alerts, and ran the incident reviews; mean time to recovery dropped from 50 to 14 minutes.

Backend Engineer, Brightwell Logistics, 2017 to 2021

- Built a Python order-routing service and its REST API for 80 warehouses.
- Wrote the migrations and indexes for the shipments database and fixed the slowest 20 queries.
- Introduced code review and a CI pipeline that ran the full test suite on every merge.

SKILLS

Python, FastAPI, SQLAlchemy, PostgreSQL, pytest, Docker, Kubernetes, Terraform, Prometheus, Grafana

EDUCATION

BSc Computer Science, Halden Technical University, 2016
