Profile

I am a backend developer with five years of experience in product teams. I enjoy turning messy requirements into small, well-named services. Most people on my team call me Liyah.

Core skills

Skill	Years	Where used
Python	5	Order and billing services at Marlow Retail
FastAPI	3	Customer REST API, 25 endpoints
PostgreSQL	4	Billing database, reporting queries
pytest	4	Unit tests and some integration tests
Docker	2	Local development and staging images
AWS	1	Deployed a staging stack with a teammate
Grafana	1	Read dashboards during on-call weeks

Work history

Backend Developer, Marlow Retail, 2021 to present. I own the customer REST API for orders (FastAPI) and the billing service behind it. I add endpoints, validate requests and map errors to clear responses. I wrote the indexes for the billing tables after a slow month-end report and brought it from 40 seconds to 6 seconds. I write unit tests for my own changes and review pull requests on the team. I take one on-call week in five.

Junior Developer, Fenwick Digital, 2019 to 2021. Fixed bugs in a Django app and wrote small REST endpoints with guidance from a senior colleague.

Education

BEng Software Engineering, Ashford Institute of Technology, 2019
